To the Department of Justice,

Being healthy and happy is what life is all about. Not just for people but for Mother Earth as well. Monsanto is hurting Mother Earth, polluting water and poisoning the ground. And what about farmers? How can Monsanto threaten farmers

who don't buy their seeds? This is outrageous!

My husband and I eat organic food only, supporting the local farmers in our area. We will not eat conventionally grown food because we have no idea what is in it. Most of the conventionally grown foods are grown with Monsanto seeds which are genetically modified, with no labels on the packages.

Our government needs to do something positive for its people and Mother Earth.

Please.....don't look the other way.

Sincerely,
Denise Pearl
